ABSTRACT Four new resin-glycosides, named mammosides A, B, H₁, and H₂ were isolated from the tuber of *Merremia mammosa* (Convolvulaceae), a Jamu raw material. Their chemical structures have been elucidated on the bases of chemical and physicochemical evidence, including synthesis of a glycosidic acid designated as mammoside I.

抄録 インドネシアの薬用植物の1つ、*Merremia mammosa* (ヒルガオ科) 塊根から4種の新規樹脂配糖体、mammoside A, B, H₁, H₂を単離し、それらの化学構造を物理化学的手法及び酸性配糖体 mammoside Iの合成等の化学的手法を用いて明らかにした。
